How do I size a room for an uninterruptible power supply?

The most important factor in sizing a room for an Uninterruptible Power Supply is space around the equipment. You need to provide room for air to circulate and ventilation, as well as for manoeuvring around for maintenance and servicing.

Do smart devices need an uninterruptible power supply (UPS)?

Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day. However, typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply (UPS) comes in.

How do I Keep my uninterruptible power supply safe?

Keeping your Uninterruptible Power Supply at the right temperature is crucial for both performance and safety. Proper ventilation is crucial for any UPS room, keeping the temperature comfortable and ambient.

What is an uninterruptible power supply?

As the name implies, an uninterruptible power supply is just that: uninterruptible. This means power surges, blackouts, brownouts, and any other power-related problems won't result in your UPS going offline. The UPS will only turn off if its battery is emptied, it's turned off manually, or it is physically destroyed by an outside force.
