

How to remove the solar control meter

How does solar metering work?

When you install solar, the original meter gets replaced with a bi-directional (or 'Buy/Sell') meter. This bi-directional meter is what makes net metering possible by measuring solar energy production as well as any electricity that you are also buying from the utility company.

How do I mount a meter?

Mount the meter either directly on a flat surface, or on a DIN rail using the DIN-rail clips supplied with the meter. 1. Carefully remove the terminal blocks on both sides of the meter. 2. Use the two mounting holes on both sides of the meter to mark the hole positions.

How do I connect a solar meter to an inverter?

The meter is connected to an RS485 port of one of the inverters. If the inverter has a second RS485 port, use this port to connect between the inverters. If the inverter has only one RS485 port, use an RS485 Plug-In (available from SolarEdge) or ZigBee communication between the inverters.

What should I do if my SolarEdge meter is not working?

Contact SolarEdge Support. If the meter is connected at the load connection point or if the meter is used for production metering, check for reversed CTs, swapped CT wires, or CTs not matched with the lines. Disconnect power immediately! Check the line voltages and the meter ratings. The line voltage is out of range (V_{ac} ±20%).

How do I use a meter?

1. Carefully remove the terminal blocks on both sides of the meter. 2. Use the two mounting holes on both sides of the meter to mark the hole positions. Do not use the meter as a drilling guide; the drill may damage the screw terminals and metal shavings may fall into the connectors.

How do I Reset my solar PV system?

How to reset your Solar PV system
How to reset your Solar PV system 1. If your generation meter has no display and no flashing lights like below then your system will need to be reset 2. In your property near your electricity meter, you will have a consumer unit that looks something like these pictures below.

Just went to get a FIT meter reading and discovered the meter has died, or at least is doing a slow flash on and off of 888888. Checked all circuit breakers ... [More](#)
