Once the corrosion is removed, clean the connectors and dry them with a paper towel. Reconnect them and try turning the inverter again. 3. A discharged or faulty battery

When does the inverter shut down?

The inverter will shut down when the DC input voltage drops below the "Low battery shutdown" parameter. The LEDs will signal shutdown due to low battery. The inverter will automatically restart, after a minimum delay of 30 seconds, when the battery voltage has increased above the "Low battery restart" parameter.

What should I do if my inverter beeps a lot?

Here's what to do: Check the Battery Voltage: Continuous beeping often indicates low battery voltage. Use a multimeter to check the voltage. If it's low, charge the battery or replace it if necessary. Overload Warning: The inverter beeps if it is overloaded.

How to install a battery inverter?

Install the inverter in a dry and well-ventilated area. For best operating results, the inverter should be mounted on a flat surface. Mount as close as possible to the batteries. Try and keep the distance between the product and the battery to a minimum in order to minimize cable voltage losses.
