Are lithium ion batteries dangerous?

All types of batteries can be hazardous and can pose a safety risk. The difference with lithium-ion batteries available on the market today is that they typically contain a liquid electrolyte solution with lithium salts dissolved into a solvent, like ethylene carbonate, to create lithium ions.

Are lithium-ion batteries a fire risk?

Over the past four years, insurance companies have changed the status of Lithium-ion batteries and the devices which contain them, from being an emerging fire risk to a recognised risk, therefore those responsible for fire safety in workplaces and public spaces need a much better understanding of this risk, and how best to mitigate it.

Are lithium-ion batteries causing property damage?

Property damage is another significant concern, with fires caused by lithium-ion batteries leading to the destruction of homes, vehicles, and other valuable assets. There have been more than 300 incidents of lithium battery-related damage reported across the country in the past year.

What happens if a lithium-ion battery fails?

In addition to this, the way a lithium-ion battery produces power also generates heat as a by-product. In an uncontrolled failure of the battery, all that energy and heat increases the hazard risks in terms of fuelling a potential fire.

What are the risks associated with lithium-ion technology?

With incidents of battery fires and malfunctions making headlines, it is crucial to understand the potential hazards associated with lithium-ion technology. By recognising the risks related to overcharging, physical damage, and defective units, users can take proactive steps to ensure safety and prolong the lifespan of their batteries.

Do lithium-ion batteries pose transportation risks?

Lithium-ion batteries also pose specific transportation risks, especially in the context of air travel and cargo shipping. The International Air Transport Association (IATA) and other regulatory bodies have strict guidelines in place to mitigate the risks of transporting these batteries.
