How do I wire my RV solar panels?

Here is a nice video on how to complete your solar wiring (on a hot wire): [RV Solar Simplified! Simple RV Solar Setup](#). After connecting your solar panels, you will need to connect their output to the solar charge controller. The charge controller, in its turn, gets connected to the battery bank through a fuse box: [PDF Schematic and wiring](#).

What are the components of an RV Solar System?

The most basic RV solar system comes with three main parts: solar panels, a charge controller, and a battery bank. RV's that are solar-ready typically come with pre-installed wiring but not the components. Pre-built RV solar panel kits are a good way for beginners to purchase a semi-complete system that comes with compatible parts.

How do you wire a 12V solar panel system?

Here are the steps for wiring your 12v solar panel system: Mount the RV solar panels to the roof. Decide whether these should be wired together in series or parallel. Attach the charge controller to the inside of the RV near the battery bank. Run wires from the solar panels to the charge controller with a circuit breaker or fuse in-between.

What size fuse should a solar panel use?

The fuse between the solar panel and the solar charge controller should be 1.3 times the size of the Optimum Operating Current of the panel (see the back of the panel for its specification). For a single 100w panel a 10A fuse is normally adequate.
