Do you have problems with your solar panels?

Nearly seven in 10 owners had had no problems with their solar panels in our survey of over 2,000 owners.* The most common - and most serious - problem owners face is with the inverter. In some cases inverter problems mean you don't get any usable renewable electricity. It can also be a pricey problem to fix.

Why do solar panels fail?

Blown bypass diodes - Permanent failure often due to severe localised shading or overheating. Earth leakage is a common problem with older solar panels that is often caused by backsheet failure leading to water ingress or PID or potential induced degradation. Strings of solar panels operate at high voltages, up to 600V or higher.

Why is my solar panel not working?

Loose connectors and improperly seated terminals can cause low voltage or current output. Junction boxes should be checked for tight screws or properly crimped connections. Rare manufacturing defects may require panel replacement. Micro cracks in solar panels can lead to power loss over time.

Can damaged solar panels cause power loss?

After learning how damaged solar panels can result in power loss, let's explore another common issue: hotspots in solar panels. This problem arises due to electrical issues, often triggered by improper installation or broken wiring, which can lead to power loss or even fires.

What happens if your solar panel wiring is faulty?

Faulty Electrical Wiring If your electrical wiring on the roof is faulty or old, it can disrupt the efficiency of your solar panels by affecting electricity production. This happens because, over time, the wiring can develop problems like loose connections, corrosion, and oxidation. Even pests like rats can damage the wiring by chewing on it.
